EMERGENCY MEDICINE 2017
We are the distributor of high-quality emergency medical products throughout Europe. Our goal is to provide innovative products of the highest quality with a strong focus on individual and personalized customer service. We bring together products from the United States, Canada, Israel, the United Kingdom and Sweden to meet the special needs of those providing emergency patient care in a multitude of environments.

Our company believes that if a product is used in the most challenging military environments then it is no doubt the best for civilian clinicians and rescuers to use closer to home. For that reason, our customers are diverse and in many clinical settings. We work with civilian EMS ambulances and helicopters, militaries and other government agencies, mountain rescue organizations and hospitals. In addition, we serve the needs of private individuals seeking outdoor adventures, those who know that to play hard they need to stay safe.

Our products have been researched and developed by clinicians and rescuers who have experienced some of the worst care scenarios. Focusing on the critical need for something they did not have, each product developer has made something to help us all, providers and patients. We greatly appreciate the dedication and effort of these product developers. Because of them we can confidently provide our customers with the best of the best.

To our varied and diverse customers, we value the trust you put in us and our products. You have our admiration and we appreciate your commitment to do your best with the best.
We proudly represent our products in what we hope is the most professional manner. We do not host a webshop because we believe it is important to understand as much as possible about the specific needs of each customer. What we offer our website visitor is the opportunity to develop a “Product Order Request” by choosing those items you are interested in ordering.

After completing and submitting your “Product Order Request” you will receive an offer via e-mail from our company that will give you product price, VAT and shipping costs. This offer will also include the estimated shipping date that your product will leave our warehouse.

To accept our offer simply reply to this e-mail and your order will be processed. An order confirmation will be sent to you by return e-mail. If you have any questions regarding your order or would like to make any changes please let us know.

If we need any further information that we believe will better enable us to assist you then we will contact you via e-mail.

Those we work with

Emergency Medical Services: Every community relies on their local EMS organization to provide them with the most modern and responsive emergency care. Our products have been specifically chosen to follow current guidelines and assist you in meeting your responsibility to your community. “The patient is the most important person at the scene of an emergency.” Prehospital Trauma Life Support, 6th Edition, 2007

Fire Departments: The responsibilities of fire departments demands specific medical products and emergency equipment. To assist you in your work our products have been chosen by our fire department experts. “When the experts panic they call the fire department.” Leroy McKeever FDNY (Retired)

Hospitals: Hospitals have specific needs to meet their patient and staff requirements. Our products have been chosen for you in an effort to simplify your search. “The very first requirement in a hospital is that it should do the sick no harm.” Florence Nightingale
Law Enforcement: Law enforcement agencies have a vital responsibility in protecting the public and protecting themselves. Our law enforcement experts have chosen our products specifically for your purpose. “Tactical law enforcement officers are likely to be the first on the team to encounter casualties or be required to administer self-care or care to a team member.” Feldman: Effectiveness of Tactical Emergency Medical Support: A Systematic Review.

Military: Military demand for medical products is based on a critical need at a critical time. No matter the stage of combat or the stage of care, our products have been chosen because of their innovative ability to save lives in the worst of times, in the harshest environments. “In the combat environment, the medic must consider: What is the overall mission at this moment.” Prehospital Trauma Life Support, 6th Edition, 2007

Search and Rescue: When a call for help comes into a rescue organization there are very specific environments that must be taken into consideration. To meet the needs of water, mountain and other rescuers, we have chosen products specifically for you. “Woman and men of retiring timidity are cowardly only in dangers which affect themselves, but the first to rescue when others are in danger.” Jean Paul Richter
HEMOSTASIS

Airway  Breathing  > Circulation  Disability  Exposure/Environmental Control
Pressure Bandage - Emergency Bandage

The Emergency Bandage is designed for quick and easy application by professional and non-professional caregivers to provide effective, multi-functional treatment.

The Emergency Bandage's sterile, non-adherent pad applies pressure to any site, is easily wrapped, secured and has an additional application, similar to a tourniquet, to further constrict blood-flow. The product is so easy to use that even an injured person can self-apply the bandage with one hand.
Compressed Gauze - S-Rolled

The Compressed Gauze is S-Rolled and ideal for compact, easy to use, cotton gauze. It is designed for wound packing and basic bandaging and it's properties make it excellent for hemorrhage control in conjunction with compression dressings and hemostasis agents. It is packaged in a unique dispenser that allows for controlled application and protects unused portions from contamination during application. It's small size and rugged, durable vacuum sealed packaging makes it easy to fit in both individual first aid kits and medic kits. The Compressed S-Rolled gauze is 6-ply and manufactured in the U.S.A.

S-Rolled Gauze
Size Packed: 7.6 x 6.3 x 4 cm
Gauze Size: 11.4 x 375 cm

QuikClot® EMS Rolled Gauze™
QuikClot® EMS Dressing

QuikClot® EMS products are the same well known QuikClot® kaolin products but packaged specifically for pre-hospital Emergency Medical Services.

QuikClot® activates factors in the blood to initiate and promote rapid coagulation. It is easy to use and contours to fit any wound. QuikClot® products are the first product to stop arterial and venous bleeding in seconds.

The EMS QuikClot® product (Dressing and Rolled Gauze™) are the same Kaolin based product but intended for different applications. The EMS products do not have X-Ray detectable strips.

TOURNIQUET SYSTEMS

**Combat Application Tourniquet™**

The Combat Application Tourniquet™ (C-A-T™) is a small and lightweight one-handed tourniquet that completely occludes arterial blood flow in an extremity. The C-A-T™ uses an Omni-Tape™ band to fit a wide range of extremities combined with a one-handed windlass system.

The windlass system uses a free moving internal band to provide true circumferential pressure to an extremity. The windlass is then locked in place; this requires only one hand, with the Windlass Clip.

AAT001 6515-01-616-4999 Abdominal Aortic Tourniquet 1 €415.00
TOURNIQUET SYSTEMS

Abdominal Aortic and Junctional Tourniquet™

Difficult bleeds in the inguinal region continue to be a significant source of morbidity and mortality on the battlefield. Providing solutions for treating these wounds has direct lifesaving results.

The AAJT™ provides a rapid application of pneumatic compression to the aorta at the abdominal-pelvic junction to occlude blood flow in the inguinal arteries. The specific claim of the device is to occlude arterial flow through the inguinal region.

The risks versus benefits of the device should be considered prior to any application. The dangers of junctional bleeding include imminent exsanguination and death. If direct pressure, extremity tourniquet application and hemostatics do not result in cessation of bleeding the Abdominal Aortic Tourniquet provides for a direct pressure capability to cease the flow of arterial blood below the application site.

Successful occlusion of CFA flow in 15 of 16 participants (94%): “The evaluation of an abdominal aortic tourniquet for the control of pelvic & lower limb haemorrhage”. Academic Dept. of Military Surgery and Trauma Royal Centre for Defence Medicine, UK

Approved Indications for Use:
- Pelvic hemorrhage
- Penetrating abdominal trauma
- Inquinal or leg hemorrhage
- Axilla hemorrhage

Contraindications for Use:
- Known abdominal aortic aneurysm
- Pregnancy

HYPOTHERMIA PROTECTION

[Logos of various companies related to hypothermia protection]
Blizzard Reflexcell™ Heat

Blizzard Protection Systems (BPS) are using their famous Reflexcell™ material and adding self-activating warming pads. This combination provides both insulating passive and active warming for those casualties that need the ultimate in hypothermia prevention and treatment.

Passive Warming Properties:
• material traps warm air
• structure reduces cold spaces
• completely water & wind proof
• Velcro closing front and side vents allow for closed protection but repeated easy access
• integrated hood provides secure head coverage
• foot closure drawcord fully protects the feet

Active Warming Properties:
• 4 heating areas inside the blanket — 2 over the torso and 2 over the groin/lower abdomen
• each of the 4 heating area have 4 separate heating pads in an envelope, attached by Velcro for repositioning if required
• 2 pads in each envelope are fast acting to provide quick heat
• 2 pads in each envelope are “slow burn” to give steady heat over 12—14 hours

Blizzard Heat Dimensions:
Vacuum Pack: 32 x 21 x 8 cm
Weight: 1500 gm
Volume: 5.5 L
Size unpacked: 2.0 x 2.4 m

ACTIVE WARMING PRODUCTS

Hypothermia Prevention and Management Kit (HPMK®)

The NAR HPMK is recommended by the CoTCCC for the prevention of hypothermia during casualty care. The exterior Heat Reflective Shell (HRS™) has a build-in hood and is constructed of a 4-ply composite fabric that has non-conductive reflective properties. Its tapered shape from top to bottom maximizes its isothermal capabilities and the Velcro closures provide rapid access to the casualty. It is weight tested to support 115 + kg. and comes vacuumed packed in a durable pouch.

The self-heating liner is a Ready-Heat™ 4 panel blanket that provides a minimum of 6 hours continuous dry heat up to 41°C.

HPMK Dimensions:
Packaged: 17.15 x 26.7 x 14 cm
Unpackaged: 198 x 109 cm
Weight: 1588 gm

ACTIVE WARMING PRODUCTS

QinFlow (QiF™) Warrior

The Warrior is a high performance, battery powered, lightweight, and completely portable warmer. The set point temperature is 38 ± 2°C at flow rates of 2-200 ml/min for the full warming range of 4-38°C and 290ml/min for the 20-38°C warming range. The set temperature is achieved within up to 11 seconds.

The QPORT1100 - Complete system contains:
- One base unit
- One rechargeable battery
- One battery charger
- One charger adapter
- Two disposable IV units
- One soft carrying bag

All of these parts are available for individual sale. Additionally there is a pole mounting unit that can be used to attach the warmer to the side of a stretcher or IV pole.

READY-HEAT™ is comprised of three major components - the nonwoven blanket, the heating (chemical) element and the outer translucent polybag. The Ready-Heat™ products heat up to approximately 40°C (maximum heat may be up to 52°C) when exposed to ambient air (Infant Cocoon - 37.7°C). Full heat is reached in 15 - 30 minutes and they remain heated for a minimum of 8 hours.

Ready Heat™ Hospital Temperature Management Blanket

The Ready-Heat™ Temperature Management Blanket is a fully mobile patient warming device that enables hospital use from pre-op to intra-op to post-op. It warms up automatically with no need for a power source.

Manufactured in the U.S.A., the blanket is made of medical grade non-woven material with thermal pads and has a three (3) year shelf life. Its versatility allows for the treatment and prevention of hypothermia in a variety of hospital settings.

Each blanket heats to approximately 43° C when exposed to ambient air and remains heated for up to 10+ hours. Full heat is reached in 15 - 20 minutes.

PASSIVE WARMING PRODUCTS

APLS Thermal Guard, Mylar, Rigid and Life Guard

All APLS products are portable and disposable absorbent litters that provide maximum thermal protection during emergency transport. Their highly absorbent cellulose core contains blood and body fluids during transport.

Features:
- Leak proof backing for additional strength while dragging
- Built in thermal properties for warmth during transport
- 8 handles to allow for carrying and easy transport
- Locker pocket for documents, x-rays etc.
- Bottom straps to secure to stretchers/litters
- Lightweight but strong
- Compressed vacuum packed
- Head Guard can be detached
- Velcro access points to allow patient access on both sides
- Sealable top layers to provide patient warmth

APLSV-3391H3-2: APLS Thermal Guard
Finished product size: 83.82 x 231.14 cm
Weight: 3100 gm
Up to 4.5 liters of blood and bodily fluids contained with easy disposal
Supports 190.51 - 201.12 kg - wet or dry

APLSV-2276H/6-2: APLS Mylar
Finished product size: 55.88 x 193.04 cm
Weight: 1320 gm
Up to 1.7 liters of blood and bodily fluids contained with easy disposal
Supports 145.15 - 158.76 kg - wet or dry

APLSV-2276-2RFG: APLS Rigid
Finished product size: 55.88 x 193.04 cm
Weight: 3180 gm
Up to 1.7 liters of blood and bodily fluids contained with easy disposal
Supports 145.15 - 158.76 kg - wet or dry

APLSV-328IH/6-2: APLS Life Guard
Finished product size: 81.28 x 205.74 cm
Weight: 650 Gm
Contains up to 1.25 liters of blood and body fluids
Supports 145.15 - 158.76 kg - wet or dry

Blizzard Reflexcell™

Blizzard Protection Systems (BPS), manufacture a range of products aimed for Emergency Rescue and Military use. The radical new technology provides maximum warmth and weather protection in the smallest of packages.

Available in Blanket, Sleeping Bag and Vest:
- Traps warm air
- Reduces cold spaces
- Reduces convection heat loss
- Completely water & windproof
- Compresses to minimal size
- Stores indefinitely

Reflexcell™ has a cellular construction that traps warm air. Embedded elastic bands draw the material to the body thereby reducing cold spaces and heat loss by convection. Silvered surfaces block heat loss by radiation. It is completely waterproof and windproof.

This unique combination gives Reflexcell™ vastly superior warmth versus any comparative emergency product. However, its greatest strength is that it can be compressed into the tiniest of packages and stored indefinitely without damaging its performance – eliminating any storage and delivery problems.

PASSIVE WARMING PRODUCTS

MediWrap®

MediWrap® is ideal for the protection of casualties and victims of any age to help prevent the onset of trauma induced hypothermia.

All MediWrap® products are lightweight and easy to store. They also provide a simple passive warming solution to patients undergoing surgery, especially when they are not known to be at risk for hypothermia and active warming steps are not taken. All MediWrap® products are highly thermal retentive and help prevent convective, conductive, evaporative, and radiative heat loss.

# PATIENT PROPERTY BAGS

## SMARTSAFE™

SMARTSAFE property bags provide all levels of care-givers with a secure and easy way to track patient’s personal possessions as they move from ambulance to hospital and department to department. The bags are tamper proof and durable to hold such things as wallets, watches, jewelry and glasses.

Each SMARTSAFE bag has a unique bar code tracking system with 5 peel off labels for patient documents. There is also a bar coded wrist band for patient application.

PATIENT TRANSFER BOARD

CM ProSlide™

The ProSlide™ is used for transferring of patients, between X-ray/ OR-tables and trolleys/ beds. It can also be used for bedside X-ray or as an aid for turning patients to side position. Often used in emergency units for transferring of trauma and emergency patients, the ProSlide™ can also be used as a prehospital tool for application of the T-POD.

The ProSlide™ is a transferring aid with low friction and is used for easier transfer of patients. ProSlide™ is made of solid 3mm HD-Polyeten. The ergonomic handles give neutral working angles. The material is highly flexible even during cold prehospital use. Products no artifacts.

Dimensions: 86 x 39 x 1 cm
Weight: 780 gm
CM TraumaMattress™

The CM TraumaMattress™ eliminates difficult and potentially dangerous transfer and movement of injured patients. Saving time on patient transfer increases patient safety and speeds treatment.

The special padding reduces the risk of pressure injuries for patients that may be on the CM TraumaMattress™ for long periods of time. The cross-over X-fixation of the top body straps provide stable immobilization of the patient. The original TraumaMattress™ covering can be replaced if damaged.

- Optimized for X-Ray and CT
- Provides safe and easy movement
- Relieves pressure

The disposable CMCOVER™ retains the warmth of the patient. It fits directly over the CM TraumaMattress™ and comes with a T-Fix immobilizer to stabilize the patient’s head and eliminate movement. Due to the absorbent qualities of the CMCOVER™ it reduces the cleaning time of the CM TraumaMattress™.

**FAST Stretcher**

The FAST Stretcher is a portable device to assist rescuers in the rapid and safe transport of sick and injured persons. Re-use of the FAST Stretcher is limited and based on normal wear and tear of the device. If re-use is planned the stretcher must be carefully checked for any damage and it can be machined washed at 60° C if re-use is possible.

- Dimensions: 193 x 76 cm
- Maximum weight capacity: 226.7 kg
- 10 handles allow for several rescuers to assist in transport if needed for larger patients
- Can be used by 2 - 6 rescuers but 4 rescuers are recommended for normal transport
- Water resistant and leak proof fabric

PATIENT TRANSFER SHEET

FlexiSlide®

The FlexiSlide® is a single-use patient transfer sheet ideal for departments across the hospital, but particularly designed for use in procedural environments such as Operating Theatres, Radiology, Maternity, Endoscopy and Accident and Emergency. As well as assisting in the prevention of cross infection, the FlexiSlide® has been designed to make patient handling both easy and safe, helping prevent back strain and injury.

FlexiSlide® will assist in the practical and comfortable movement of patients with the least possible disruption and will minimize staff risk to exposure of dangerous handling maneuvers.

Lightweight, individually wrapped and easy to store, the FlexiSlide® is a single use product that helps protect both staff and patients from cross infection. It is extremely strong even in wet conditions. The FlexiSlide® is a sliding tool and should not be use for lifting.

It has been independently tested in wet and dry conditions and can withstand 415 kg of weight when wet and 424 kg of weight when dry.

Special Operations Laryngoscope Set™

The lightweight, compact Special Operations Laryngoscope Set™ is designed to operate effectively under the most extreme environmental conditions. The set is packaged with spare bulbs and batteries.

The fiber optic handle is water-proof, sand-proof, and dust-proof and features a textured gripping surface. The set includes single-use fiber optic blades made from an enhanced polymer for exceptional strength and rigidity. The handle’s removable light source is designed to work with any standard (green-spec) fiber optic blade.

Contents:
- ENT Pocket Light™ (replacement part 10-0007) with two AAA Batteries
- Laryngoscope Handle (replacement part 10-0005)
- Miller #3 Laryngoscope Blade (replacement part 10-0011)
- Mac #3 Laryngoscope Blade (replacement part 10-0013)
- Laryngoscope Pouch (replacement part 10-0006)
- Spare exam light bulb
- Two spare AAA batteries

Dimensions:
Open: 20 x 14 x 5 cm
Closed: 20 x 5 x 5 cm

The body mass range for which the resuscitator is suitable for use: >40 kg

Operating environmental limits: -18°C - 50°C

Storage environmental limits: -40°C - +60°C

Substances, other than air, which can be administered: Oxygen

Delivered oxygen concentrations under various test conditions: 55% (at 2 L/min) - 100% (at 8 L/min)

Gas inlet tube connection: 15mm length x 6mm O.D.

Stroke-volume range for operator-powered resuscitators: 800 ml

Apparatus dead space (backward leakage and forward leakage where appropriate): <6 ml

Expiratory resistance: 3.4 cm H2O

Inspiratory resistance: -4.5 cm H2O

The end-expiratory pressure generated by the resuscitator in normal use, if greater than 0.2 kPa (2 cmH20): (<0.2 kPa)

External dimensions of the resuscitator: 217 mm (length) x 121 mm (diameter)

External dimensions of resuscitator in case: 63 mm (height) x 134 mm (diameter)

Mass of the resuscitator, face mask and the resuscitator case: Total Weight 273 gm
Case 90 gm
Mask 87 gm
Total 450 gm
EMERGENCY OXYGEN SYSTEM

em-OX™

The system is non-pressurized until the reagents are added. The cylinder is pressure tested to 3.5Bar. The chemicals are non-explosive, non-corrosive and non-flammable.

Chemistry:

2 (Na₂CO₃• 3H₂O₂)
Sodium Percarbonate
Manganese Catalyst
2 Na₂CO₃
+ 6H₂O + 3O₂

em-OX™ Complete System

The complete systems contains 3 bottles “white powder” and 3 bottles “black catalyst”

- Light weight, non-pressurized chemically driven oxygen delivery system
- Delivers 99.7% oxygen (0.3% humidity)
- Safe to transport by land, sea or air
- Indefinite shelve life when stored in dry conditions under 30°C
- Flow rate is > 4 Liter/Minute
- Each complete system provides 45 minutes of oxygen
- Refill packs provide 1 hour of oxygen
- Delivered oxygen by mask is 26°C
- 1 complete system weighs 2200 gm

Suction Easy™

Suction Easy™ is a portable oral suction device used to effectively clear the oral pharynx, without question, one of the most critical of basic rescue skills. Suction Easy™ will not only facilitate training but also provide rescuers with the quickest, safest, and most effective form of immediate oral suction available.

**Design:** The unique bulb design provides consistent vacuum force, storage, and protection of the large bore suction tube (9.5mm). A double-valve system promotes continuous operation with one hand, while the other hand directs the suction tip inside the patient’s mouth. Material drawn into the bulb is expelled into a sealed collection bag. Infection control requirements of containment, isolation, and labelling are met in one simple step.

**Simple Operation:** The force of the operator’s grip does not affect suction pressure. (Gentler pressures can be achieved by shallow compressions of the vacuum bulb). Expulsion of contents from the bulb to the collection bag however, will directly reflect the force of each squeeze. The total capacity of Suction Easy™ (vacuum bulb and collection bag) is well over 1,000 cc. This volume can be moved quickly with rapid shallow compressions of the pump.

**Features:**
- Compact
- Functional
- Rugged
- Lightweight
- Dual purpose label
- One way valve

**Benefits:**
- Packs easily
- Reusable for training
- Simple operation
- Convenient
- Efficient
- One-way material flow
- Temperature tolerance -12°+60° C

**Product Specs:**
- Fluid capacity • >1000 ml
- Weight 210 gm
- Vacuum force 100 mm Hg

Peripheral Constricting IV Band - BOA™

The BOA Band provides circumferential pressure on the upper extremities for the purpose of obtaining peripheral venous access. Once the device is applied, it is rolled downward forcing blood into the veins making them more visible and palpable.

Features and Benefits:
- Increases proficiency in gaining peripheral IV access under the most challenging conditions
- Utilizes a rolling action for transfusing venous blood to the distal veins while still allowing arterial flow
- Improves the speed of completing IV access by use of the Quick Click connector and 2 finger Quick Release
- Provides quick opening with a rugged, vacuum sealed packaging that maintains cleanliness

Dimensions: 30-0009
Packaged: 10 x 7.6 x 2.3 cm
Unpackaged: 19 cm extending to 45.7 cm
Weight: 34 gm

When vascular access is unobtainable, or you face a cardiac arrest situation, the FAST IO devices are the easiest and fastest way to deliver lifesaving medications. FASTTactical™ is the newest generation of Pyng Medical’s sternal intraosseous devices. Both FAST are all in one systems for use in adults and children 12 years and older.

**GUIDELINES 2010:** AHA und ERC...concluded that the “intraosseous (IO) route is safe and effective for resuscitation, drug delivery, and blood sampling for laboratory evaluation.”

The FASTTactical™ is the same device as the FASTResponder but in black and packaged in a rigid tube.

Advantages of the FASTTactical:

- New small profile rigid tube packaging to easily fit into medic bags and protect the device from damage
- FAST: vascular access within 10 seconds, fluid and medication to the heart in < 30 seconds
- SAFE: automatic depth control prevents over-penetration
- EFFECTIVE: a bridge to a central venous line (CVL) or as a temporary replacement for a CVL
- EFFICIENT: can be inserted during cardiac / respiratory resuscitation procedures
- SECURE: the indwelling catheter is flexible and covered by a protective dome to prevent dislodgement
TACTICAL EQUIPMENT

Airway  Breathing  Circulation  Disability  > Exposure/Environmental Control
TACTICAL CUTTING TOOL

RipShears® Ripper

The Rip Shears Ripper is designed and tested by the US Navy Seals and reduces the critical time required to access and treat wound sites under multiple layers of clothing, equipment and body armor.

The Ripper uses replaceable blades made of 440A surgical-grade stainless steel. The blades are treated to improve cutting ability and edge retention, lasting 5 times longer than standard blades.

Features and Benefits:
- 3 tools in one - safety knife, trauma shears and examination percussion hammer
- Extends the life of your trauma shears
- Removes restrictive clothing, boots, body armor, car seat belts and more
- Pulls away from the skin and does not pinch or harm the patient
- Can be used right or left handed
- Autoclavable up to 132.22° C

## TACTICAL GLOVES

### Bear Claw™ and Black Talon™ Gloves

Bear Claw™ and Black Talon Ultimate Nitrile gloves are 100% nitrile material, free of the allergens found in standard latex gloves and engineered to give high performance by offering maximum protection and unsurpassed tactile sensitivity. Details include textured fingertips to help with fine motor skills, beaded cuffs for quick and easy donning and a thickened palm for durability and reliability. All gloves are ambidextrous and offer various packaging options.

TACTICAL MEDICAL BAGS

Medic / Trauma Sheet Bag

The NAR Medic / Trauma Sheet Bag provides easy access to life-saving equipment in a rugged, lightweight bag. Clear windows provide visibility and the quick attach and release straps provide stability when securing the bag to a vehicle or aircraft. When in use the bag can easily be hung by the casualty’s side.

Dimensions Folded: 51.5 x 54.6 x 12.7 cm

Casualty Equipment Bag

The NAR Casualty Equipment Bag is designed to provide enough space to contain body armor, helmet, primary weapon, night vision and any other personal equipment, allowing the casualty’s items to be quickly bagged and tagged for evacuation. The bag is constructed of 320T Nylon with a Polyurethane coating and has reinforced shoulder straps.

A casualty equipment card is included for documenting contents.

TACTICAL RESCUE

MedSled® VLR

The MedSled® Vertical Lift Rescue is designed to leave no one behind. When every second counts, MedSled is used for rapid extrication of the injured in all phases to Tactical Combat Casualty Care (TCCC).

MedSled Uses:
- Transport to all platforms: helicopters, field ambulances, Stryker Ambulances
- Rescue in difficult terrain: thick brush, sand, embankments, steep inclines, urban terrain, buildings and stairwells

Features and Benefits:
- No assembly required - ready to use
- Dramatically reduces the effort of moving wounded
- Enables a one-on-one rescue or evacuation
- Hands free tether for the waist or shoulder of the rescue, allowing use of weapons and other equipment as needed
- 3 quick release straps to secure the injured; each strap is tested up to 1,814 kg; a T-Strip provides extra support
- Integrated hoist system tested up to 4,536 kg; helicopter hoist straps included
- Comes in a rapid deployment bag that is also attachable to the MedSled® VLR for carrying equipment
- Made of high density polyethylene that protects the injured
- Fits a spineboard if needed for added support
- Decontamination compatible

MedSled® Rescue System

The MedSled® Rescue System is developed for fast rescue and transport of injured and non-mobile patients.

For building evacuations the system comes equipped with a stairway braking system that enables safe and controlled descents with no need to lift. Patients can easily be carried out of a single-story building or down stairwells in buildings that have multiple floors.

Application / Features / Benefits:

- Rescue of injured from buildings, water, beach and other hard to reach areas
- No assembly required - ready to use
- Enables a one-on-one rescue or evacuation
- 3 quick release straps to secure the injured
- Comes in a rapid deployment bag
- Made of high density polyethylene that protects the injured
- Fits a spineboard if needed for added support
- Decontamination compatible

Poc-Kit

The Poc-Kit is a versatile solution in portable stretchers. Contained in a draw-string pouch on your belt, it can be deployed in seconds and saves vital minutes in emergency casualty evacuation. When the stretcher has been deployed and is in use, the pouch can be used for carrying other equipment and supplies.

The Poc-Kit is manufactured in a Microlight material. It can also be used as a tent and for ground and concealment coverage.

- Reusable - machine washable.
- Weight tested to carry up to 150 kg

Talon II Model 90C Litter

The NAR Talon II Model 90C litter is certified “safe-to-fly” in U.S. Army Rotary Wing aircraft and meets the NATO evacuation platform specifications. It is a quad folded collapsible litter and when opened the automatic hinges lock in place and the retractable handles can be extended. The Talon II litter has 6 IV pole attachment points and comes with 2 patient securing straps.

Talon II Model 90C Litter:
- Dimensions Folded: 52 x 22 x 24 cm
- Opened with Handles Collapsed: 198 x 57 x 15 cm
- Opened with Handles Extended: 228.6 x 57 x 15 cm
- Weight: 7400 gm
- Payload: 544.3 kg
- Ground Clearance: 3.8 cm

Available accessories, sold separately:
- Talon II Carrier Bag (Black, Foliage, Coyote, DUC)
- Talon II IV Pole
- Talon II Back Rest - provides a 90 / 45° angle
- 83.82 cm Litter Stand (set of 2)

CHEST SEALS

Beacon™ Chest Seals

The Beacon™ Chest Seal is available in both a vented and non-vented version. The vented version features a patented design with 4 vents that allow for one-way airflow out of the chest cavity during exhalation while preventing airflow into the chest cavity during inhalation. The 4 vent design maximizes venting and ensures proper chest seal function in the event of an obstruction.

Bolin Chest Seal™

The newly designed BCS is a sterile occlusive chest wound dressing for treating open pneumothorax and preventing tension pneumothorax that result from gunshot, stab wounds, or other penetrating chest trauma. The patented failure-proof triple-valve design of the BCS allows air and blood to escape while preventing the re-entry of either, thereby eliminating any unwanted gas or liquid exchange at the trauma site.

- Parallel vent design to allow for folding the BCS
- Larger pull tab for easier removal of the BCS from the backing
- Dry edge added around the seal to reduce incidences of adhesive sticking to the packaging or user’s gloves
- Increased adhesive capability
CHEST SEALS

Halo Chest Seal™

- Superior Hydrophilic gel adhesion
- Maintains occlusive seal with excessive blood and perspiration
- No vent to occlude
- Large pull tab for easy removal
- Can be used to secure other dressings
- No residue left on skin when removed
- Packaging notched on 4 corners for easy opening
- Package can be resealed if both seals not used
- Performs under conditions of -40°C to +65°C
- Three years shelf life from the date of manufacturing
- Latex free

Hyfin® Chest Seals

Featuring 15.25 x 15.25 cm size and enhanced adhesive gel formulation, the HyFin® Chest Seals create a superior seal. The transparent backing allows placement directly over the wound and easily conforms to the chest. The large, easily-visible red elliptical tab assists in single step peel-and-apply application that also facilitates the burping of a wound if necessary. The Hyfin Vent Chest Seal has 3-vent channels that prevents airflow from entering the chest cavity during inspiration but allows air to escape during exhalation.

Slishman Traction Splint

The STS uses proximal traction, which is adjusted from the hip, allowing the patient to assist in the adjustment to minimize pain. Proximal traction also makes the STS convenient for application inside tight spaces, such as helicopters or entrapment.

The design of the STS prevents it from extending past the foot, allowing for better fit in transport sleds, baskets, helicopters and ambulances. The STS is visible on X-ray but the aluminum material does not obstruct visualization of dense bone.

Features:

- Applies traction from the hip
- Adjustable and one size fits all
- Easy application with a pulley system
- Can be used on amputated lower extremities
- Does not extend past the patient’s foot
- Can be applied proximal to the calf if lower leg trauma is present
- Can be used in pre-hospital and hospital environments
- Requires minimal training

Dimensions Packaged: 55 x 7.6 x 7.5 cm
Weight: 600 gm
Halo XL Trauma Dressing

The Halo XL Trauma Dressing is a highly aggressive oversized transparent occlusive dressing designed primarily to cover larger blast wounds. The XL is an excellent occlusive dressing for large abdominal wounds, peppering chest wounds associated with IED blast injuries and secondary blast injuries (SBIs) along with securing other wound dressings. The patented hydro-gel provides superior adhesion to the wound area even when moisture, fluids, or blood is present.

Halo XL Trauma Dressing Properties:

- Halo XL dimensions: 21.6 x 30.5 cm
- Superior Hydrophilic gel adhesion
- Occlusive seal in the presence of excessive blood or heavy perspiration
- No vent to occlude
- Large pull tab for easy removal
- Can be utilized to hold other dressings in place
- No residue left on skin when removed
- Packaging notched on 4 corners for easy opening
- Durable protective packaging
- Performs under conditions of -40°C to +65°C
- Three years shelve life from the date of manufacturing
- Latex free
